ACO for Pets Food

At Euclid Solutions...

ACO (B2B E-commerce Platform for Pets Food in Egypt)

- Developed a platform featuring over 10,000 products and services related to the pet food industry, including protein pet food, pet food powders, and dog nuggets.
- Used **Next.js**, React, and Prisma to build a user-friendly interface with robust backend functionality and seamless API integrations.
- Designed and implemented UI components with React and Tailwind CSS.
- Developed RESTful APIs to manage user data, products, and orders.
- Implemented authentication and authorization using Lucia and Prisma.
- Integrated third-party APIs for payment processing and shipping.
- Utilized React Query for data fetching and caching.
- Effective collaboration and teamwork skills.

If you want any more details, please, don't hesitate to reach out!

Phone number: +201121255131

Email: MarwanShehata@outlook.com

The following practices are present in **this project:**

- Use of React Hooks
- Modular CSS
- TypeScript
- React Query
- ShadCN

TabVista

A modern personal dashboard web application

Description

TabVista is a feature-rich web application that serves as a homepage for users, combining multiple utility features into a clean, modern interface. The application includes real-time information display, weather updates, task management, and personalized greetings

Key Features

- Dynamic clock display with time-based user greetings
- Weather widget with geolocation integration
- Inspirational quote generator
- Dynamic background images from Unsplash
- Personal task management system
- User authentication and persistence
- Responsive design and smooth animations

Technical Requirements

- JavaScript (ES6+)
- DOM manipulation and browser APIs
- Expertise in working with:
 - Local Storage API
 - Geolocation API
 - REST APIs and async/await patterns
 - CSS animations and transitions
 - Class-based JavaScript architecture
 - Dynamic background images from Unsplash
- API Integrations with OpenWeather, Unsplash and Quotable.io APIs

Weird Playlists

Inspired by [r/weirdspotifyplaylists](#)

Description

This web application retrieves music playlist data from the Spotify API and displays it in a carousel. The application fetches playlist information, including track names, artist names, and album artwork, and renders it as a list of song cards. Each song card contains the track name, artist name, and a link to the song on Spotify.

Key Features

- Fetches playlist data from the Spotify API using authentication tokens
- Processes and formats the retrieved data for display
- Renders a list of song cards with track information and links to Spotify
- Uses HTML, CSS, and JavaScript to create a responsive and interactive user interface

Technologies Used

- Spotify API for data retrieval
- JavaScript for data processing and DOM manipulation
- HTML and CSS for user interface design and layout
- Vite for development and build tooling
